

Western Pacific Region

08 November 2007

Western Pacific Region

- China
- Japan

- New Zealand
- Australia
- Brunei today

- 'High income'
- Large and small populations
- Governments – monarchies, democracies etc
- Variations of universal health care

Themes for inclusion

- Person has a healthy lifestyle
- Health risks are identified early
- Person has access to appropriate health care services
 - generic health services; and
 - well qualified specialist health services when needed
- Outcomes are measured

Dimensions

- Person with a disability
- Families
- Providers
 - Carers
 - Clinicians
 - Organisations

Healthy lifestyle

- Safety
- Shelter
- Access in built environment
- Nutrition
- Exercise
- Medication
- Infection control

Early identification of risk

- Carer awareness
- Practices that facilitate annual comprehensive health checks – full history, full physical examination, screening etc

Access to right health care

- Screening
- Home Visits
- Disability-friendly hospitals and health centres
- Disability aware clinicians - generic
- Specialist identified services

Outcome measurement

- Policies
- Reports
- Databases
- Research

Matrix

- Issues for development across the levels of support and across the dimensions of people
- Funding silos
- Ageing of people with disability
- Ageing of carers of people with disability

What is needed?

- Awareness ‘trickling up’
- Champion/s at the top – government, organisations, health system etc
- Training – of individuals, families and clinicians in implementing the inclusive policies
- Education – of individuals, families and clinicians

How?

- Collaboration
 - Government level
 - Research/data sharing
 - Advocacy
- ‘Focal point’ in legislation/convention monitoring etc
